MOSQUITONIX CREATES 'BUZZ' IN SAN ANTONIO

SAN ANTONIO, TEXAS — - MosquitoNix, creators of a complete business format for installing and servicing innovative outdoor insect management systems, announced the opening of its first franchise location in San Antonio, Texas. San Antonio entrepreneur, Gary Ashmore is for the first time bringing area home and business owners a fully automated misting system that utilizes a botanical insecticide to eliminate pests.

MosquitoNix will offer San Antonio consumers a test-proven system to control and eliminate insects through the automatic misting of Pyrethrum around the perimeters of a house, building or yard. Each system is equipped with a remote control that allows the user to mist between regularly timed intervals and battery back-up system that ensures the system remains on schedule in the event of a power outage. The MosquitoNix solution also features a rain detection center that prevents misting in improper weather conditions.

“Outdoor insects are no longer just a nuisance, they are also a health concern,” said Gary Ashmore, owner of the San Antonio MosquitoNix franchise. “The rise of the West Nile Virus has caused many San Antonio residents to take refuge indoors. The MosquitoNix system uses a botanical insecticide and a technologically advanced distribution system that allows home and business owners to reclaim their outdoor living spaces from biting insects.”

The MosquitoNix System is designed for residential, commercial and business settings, allowing consumers to choose a customized system to meet their specific needs, whether it is protecting a backyard pool or diners eating on the patio of a restaurant. MosquitoNix representatives perform a complete property evaluation to develop a detailed system recommendation and cost estimate before installing a system. Following the installation process, MosquitoNix representatives maintain and service systems year round. All MosquitoNix systems come with a 60-day, 100 percent money back guarantee.

About MosquitoNix

The MosquitoNix Insect Mist System is a fully-automated misting system that kills and repels mosquitos, flies, spiders, gnats, fleas, ticks, roaches and other outdoor insects. The MosquitoNix system sprays Pyrethrum, a natural insecticide derived from chrysanthemum flowers around a consumer's home or business and property perimeter at selected intervals throughout the day.

"**MosquitoNix TM** was conceived in 2002 when **mosquitoes** in the backyard of one of the founder's home became so severe that his family refused to spend time outdoors. The mission was to find a **mosquito control solution** that didn't involve smelly **mosquito repellent** lotions, dangerous chemicals, propane attracting/trapping devices, or annoying electric "bug zappers". Not long after, the **MosquitoNixTM Outdoor Insect Mist System** was born
