**DALLAS** — [MosquitoNix, Inc.](#) introduces its Outdoor Insect Mist System, which uses an automated process to deliver a natural botanical insecticide around the perimeter of homes, yards, buildings and recreation areas.

MosquitoNix Staff Entomologist Dr. Raymond Thompson notes that distributing an insecticide through an automated system satisfies both consumer and commercial demand for a solution to the nuisance and danger of outdoor biting insects.

MosquitoNix began installations earlier this year and will officially launch the system in the Dallas/Fort Worth region this spring. Plans call for national expansion through direct and franchise operations during the next two years.
